

Failing Students Not Concerned During Exams?

In a study investigating student stress levels during exams through the use of health-monitoring armbands, it was found that students with failing grades showed lower heart rates compared to those who passed, suggesting that they experienced less stress.

Passing or Failing Students: Who Cares More about their Exams?

A study conducted using health-monitoring armbands to measure stress among students revealed only subtle differences in heart rates between those who failed and those who passed. This suggests that both groups may experience similar levels of stress.
